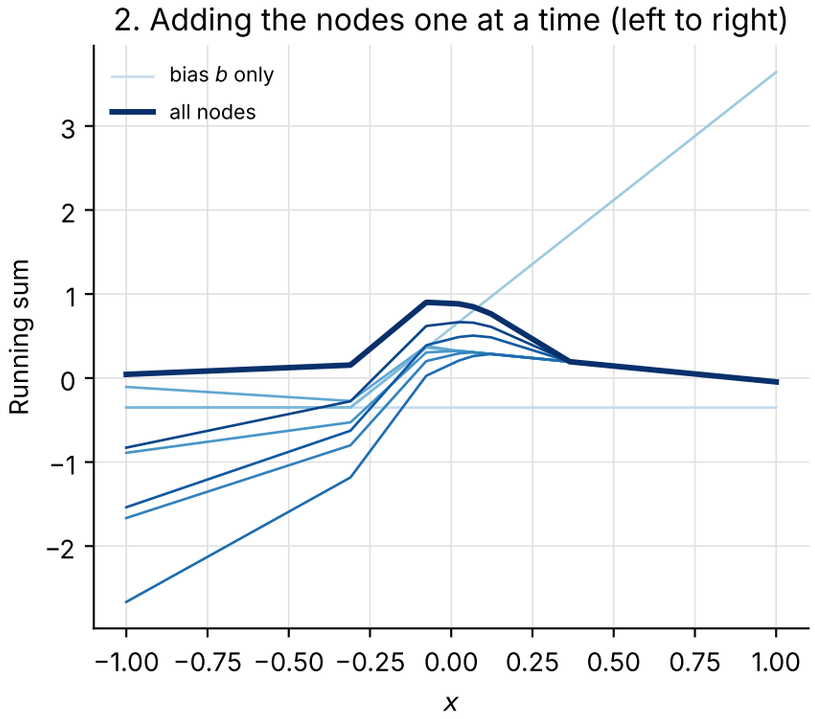
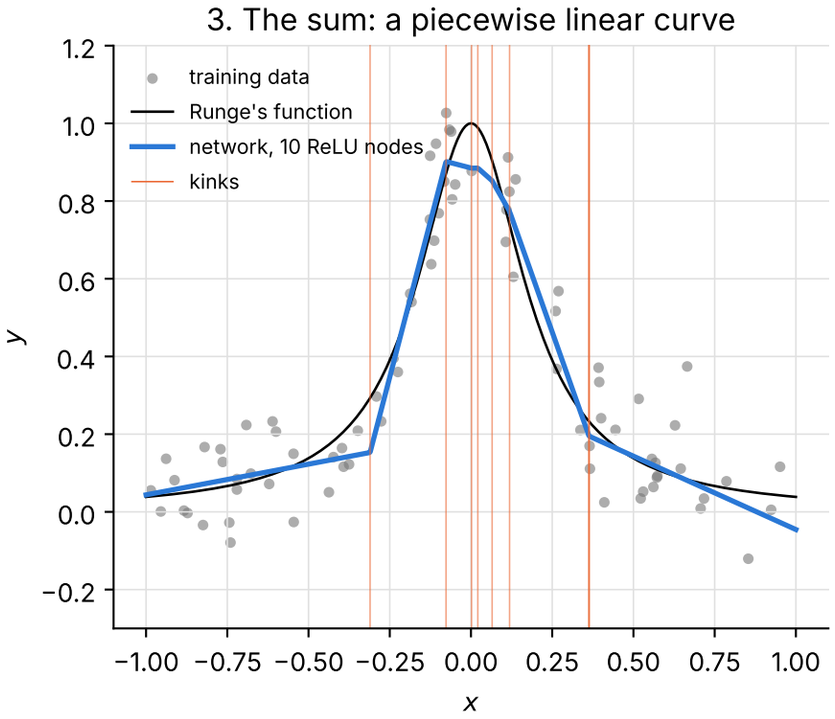
1. Each of the 9 active nodes: $w_j \max(0,\ a_j x + c_j)$
kink, $x = -c_j/a_j$
Contribution to the output
x



2. Adding the nodes one at a time (left to right)
bias b only
all nodes
Running sum
x



3. The sum: a piecewise linear curve
training data
Runge's function
network, 10 ReLU nodes
kinks
y
x
